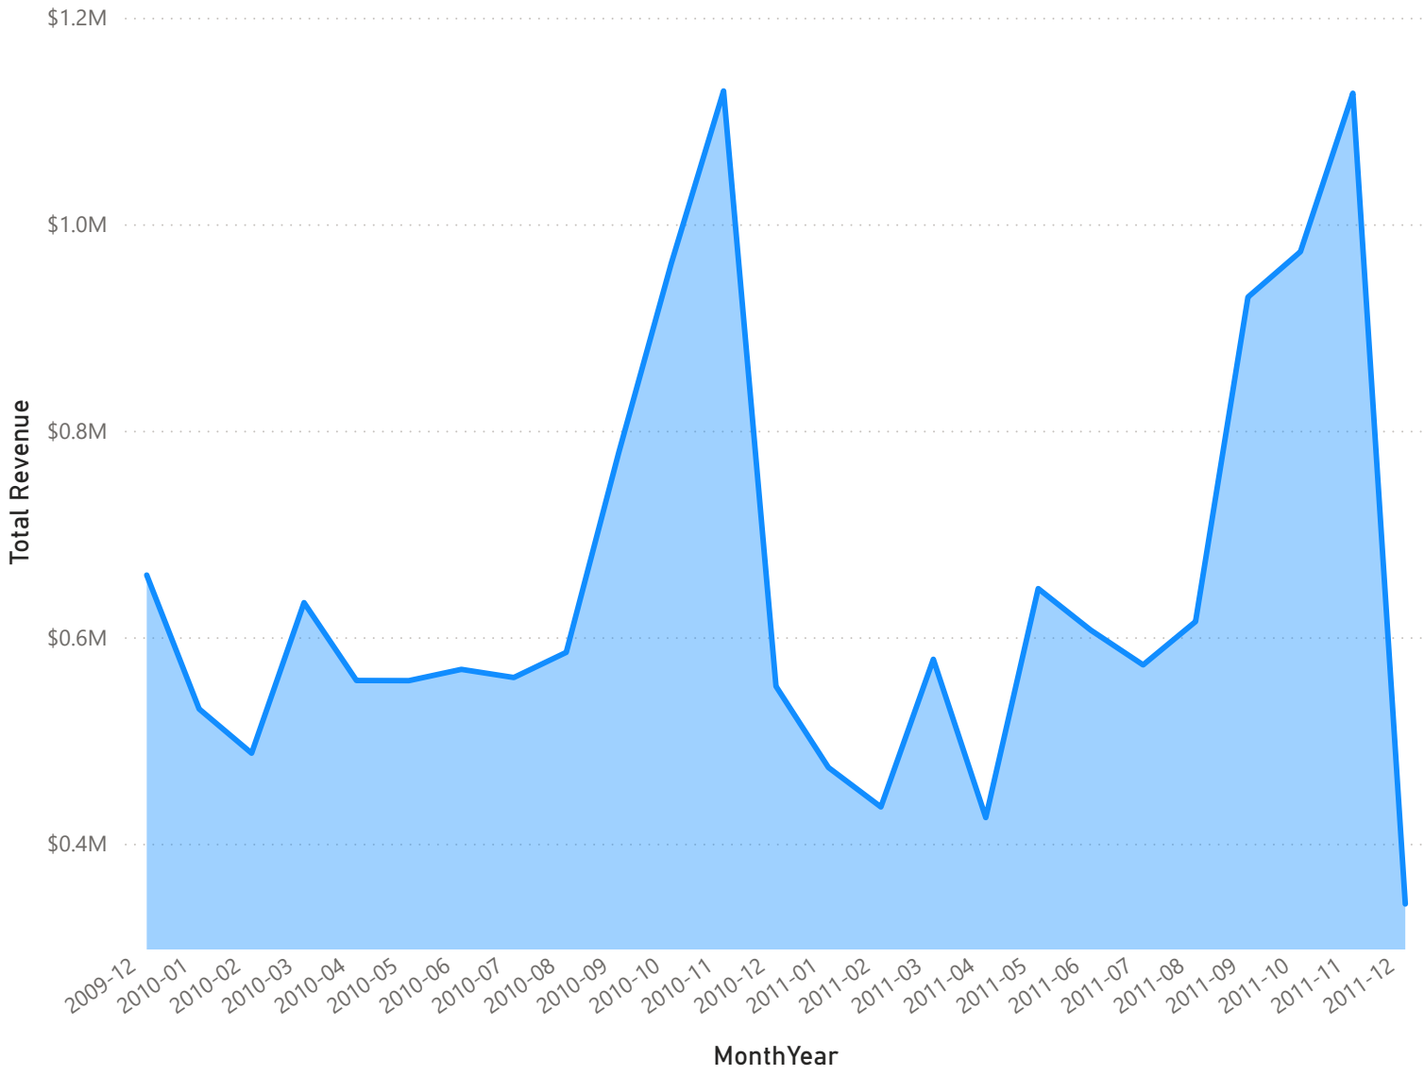
Monthly Revenue Trend



Revenue shows clear seasonal spikes around Q4 (Nov–Dec), indicating strong holiday-driven demand. Temporary drops are observed due to return adjustments and incomplete data periods.

Quick measure

Top 10 Countries By Net Revenue

Revenue is heavily concentrated in the United Kingdom, contributing the majority of total revenue. This indicates a strong dependency on a single market, posing a potential risk while also highlighting opportunities for expansion in underperforming regions.

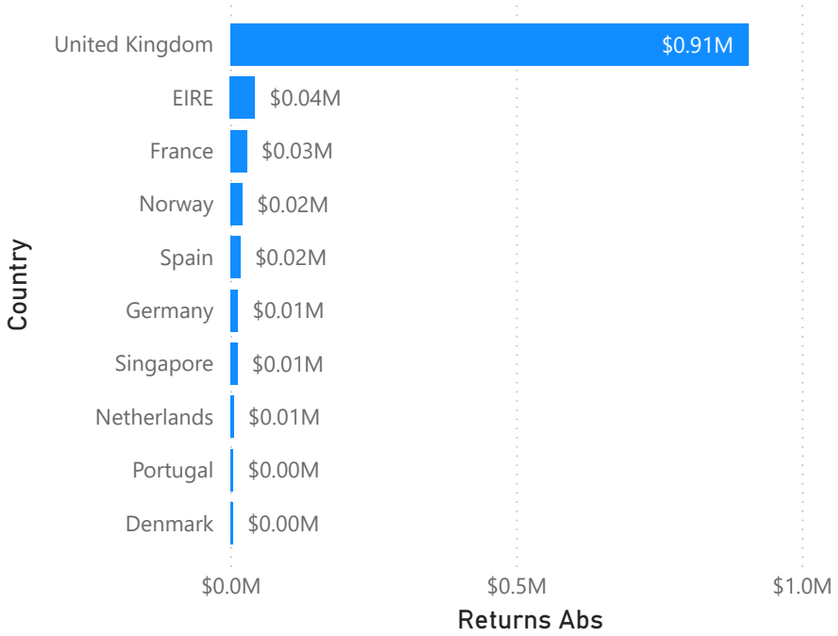
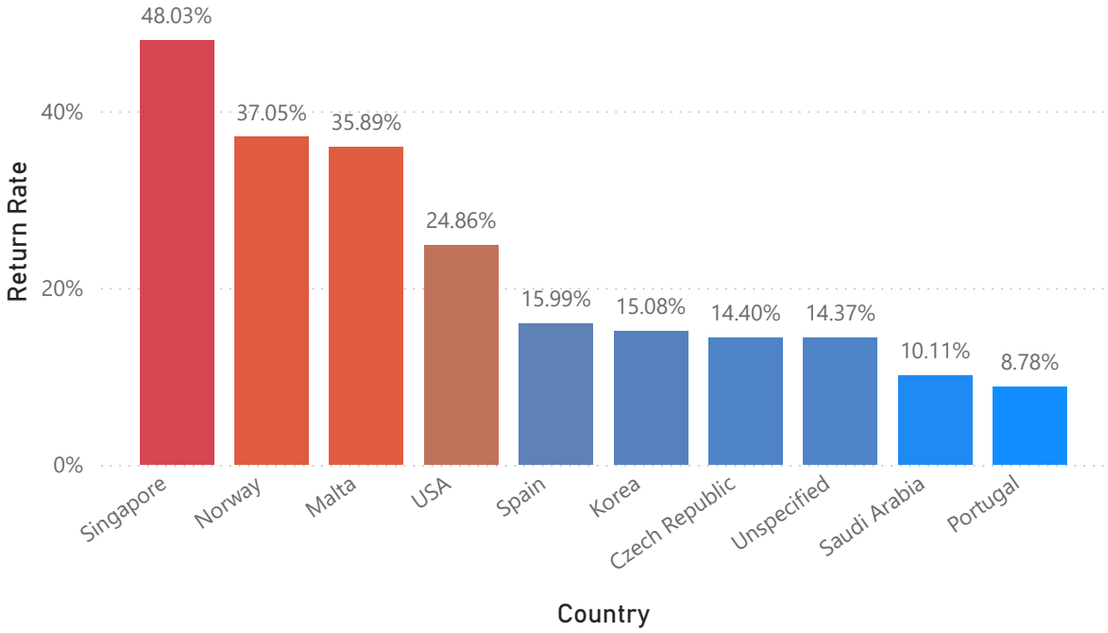
Top 10 Countries by Return Impact



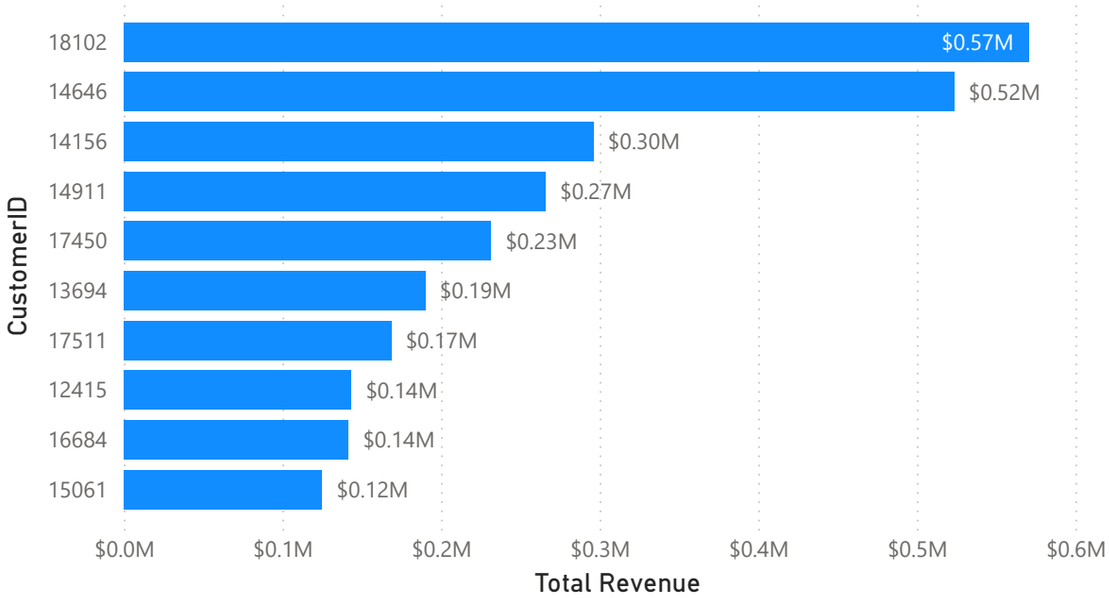
Return Rate by Country



While the United Kingdom contributes the highest absolute returns due to its scale, certain markets such as Singapore (~48%) and Norway (~37%) show extremely high return rates compared to the overall average (~6%), indicating serious localized issues.

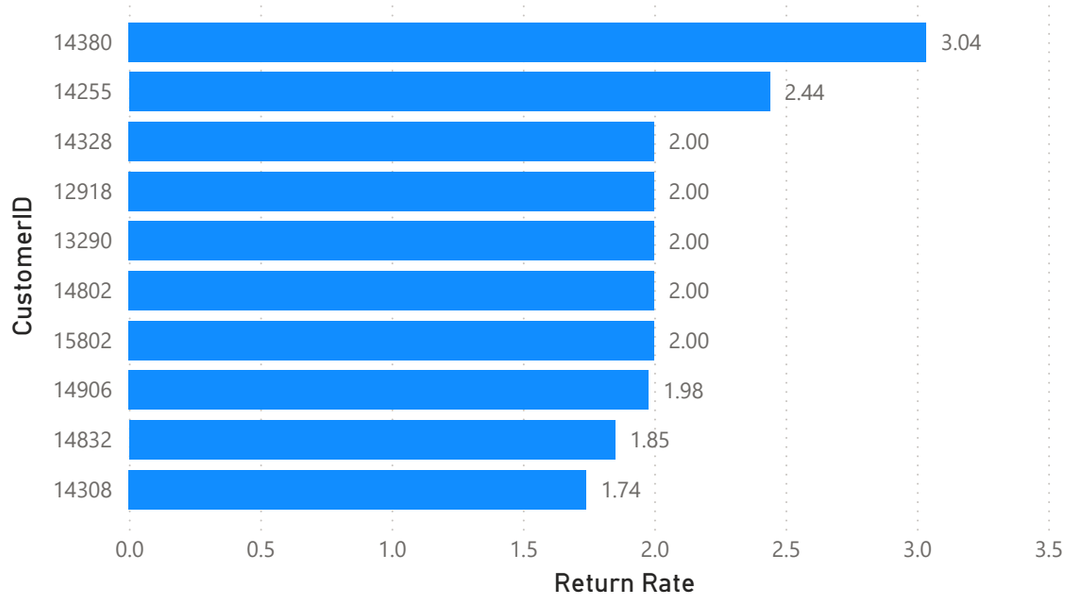
Quick measure

Top 10 Customers By Revenue



Revenue is concentrated among a small group of customers, with the top contributors accounting for a significant share of total revenue. This indicates potential dependency on key customers.

Top 10 Customers By Return-to-Sales Ratio



Some customers exhibit return-to-sales ratios exceeding 100%, likely due to returns being recorded without corresponding sales within the dataset period, indicating potential data limitations or abnormal customer behavior.

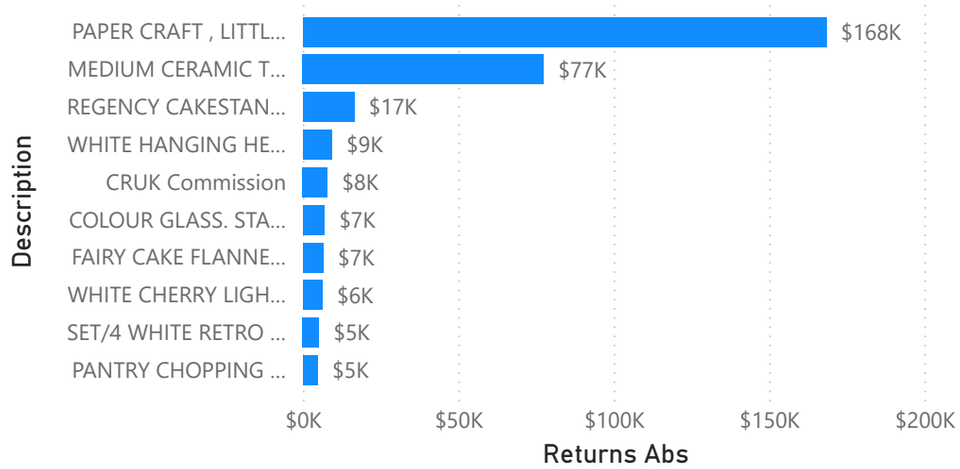
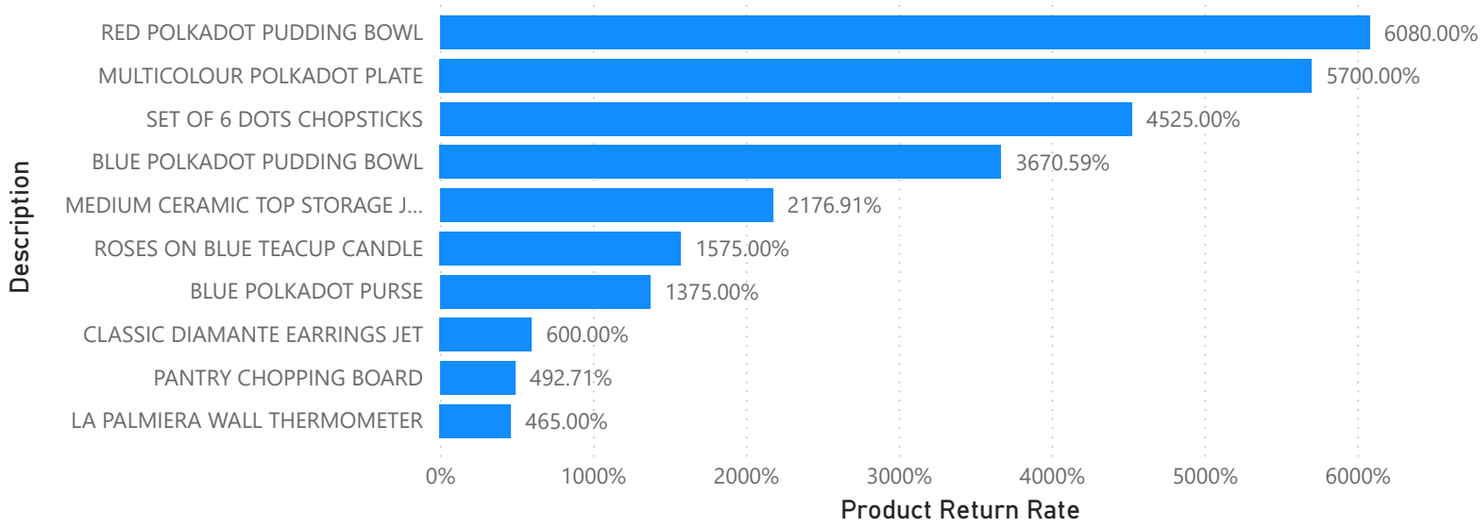
Top 10 Products by Returns(Excl. Non-Product Items)



Product Return Rate (Risk View)



While several products generate strong revenue, a subset exhibits disproportionately high return rates, indicating potential issues in product quality, inaccurate descriptions, or unmet customer expectations. Importantly, these high-return products differ from top-selling items, suggesting that operational risks are concentrated in specific product categories rather than core revenue drivers.
